

加强型抗风门(专心、专业、专利) / Windproof Steel Rolling Shutter

“吉安达”牌加强型抗风卷门是我公司针对沿海及华东地区多台风气候开发的“双专利”产品，门体具有超强刚性，能抵御强风压，特别适用于大跨度、大面积，高标准的大型厂房、库房。现由我公司独家生产。

Jianda Reinforced Windproof Door is a Double-patent product developed just for costal areas or Eastern China where typhoon prevails.
 With high-strength body it is able to resist large pressure of strong wind.
 It is very suitable for large span, broad area, high standard workshop and ware-house.
 We are the only manufacturer of this product.

箱罩 (门片式)
Box cover(gate chip)
Elaborate design and manufacture of door chip box cover, installing the blackout emergency locks on the bottom, can enhance the safety and convenient for your standard management. Makes the whole door appear more beautiful, neat and practical. And during power outage or emergency situations can be manually open, avoid to cause unnecessary losses and consequences.

箱罩 (折板式)
Box cover(Passbook Plate)
Elaborate design and manufacture of fold board type box cover, installing the blackout emergency locks on the bottom, can enhance the safety and convenient for your standard management. Making the whole door appear more beautiful, neat and practical. And during power outage or emergency situations can be manually open, avoid to cause unnecessary losses and consequences.

防坠落保护装置
Box cover(Passbook Plate)
Elaborate design and manufacture of fold board type box cover, installing the blackout emergency locks on the bottom, can enhance the safety and convenient for your standard management. Making the whole door appear more beautiful, neat and practical. And during power outage or emergency situations can be manually open, avoid to cause unnecessary losses and consequences.

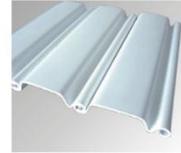

门板使用颜色:

| 性能特点 |

门片经特殊工艺加工成型:
宽度特大(130mm),凹凸分明(±28mm)线条清晰,既增加了强度,又美观大方。(专利号:033461155)。特别加装的防风钩,在风力特大的情况一下,能紧扣在专用导轨上使门体不受风力影响而损坏。
The door piece is molded through the special craft processing Width extra-large (130mm), the concave-convex trenchant(around 28mm)line is clear, which increased the strength, and beautiful and dignified. (patent no.: 033461155). With the Special windbreak hook, under the situation of super-large wind, the special windbreak hook can spread in special guide rail which prevent the damage made by the wind.

门片连接采用专利技术:
不用封口,使门体永远不会被封口卡住而影响正常运行。(专利号:032599293)
The door piece connecting is adopt to the patent technology No sealing,the door will never be sealing stuck and affect the normal operation. (Patent NO.032599293)

门体底部及导轨四周密封:
特制的抗风门专用导轨和底梁,四周装有优质抗风门专用密封材料。使门体关闭后,能有效阻挡雨水、灰尘等杂物进入,并起到隔热、隔音、保温及密封效果。
The door bottom and guide rail sealing around: Special air inlet with special guide and bottom resistance, install special sealing material for excellent anti air inlet. While the door closed, it can effectively block rain, dust and debris into, have heat insulation, sound insulation, heat preservation and sealing effectiveness.

特制加大加厚导轨 (100X53X2):
一般卷帘门在上下运行时,门片与导轨直接摩擦噪音大,而且门片与导轨极易磨损。吉安达抗风门导轨有特别设计的防噪耐磨材料,可有效降低门体运行时的噪音,同时也延长了门体的使用寿命。采用新技术固定导轨,使门体更美观、坚固、耐用,更适应大跨度、大面积、高标准的大型厂房、库房。
Increased thickening special made guide(100X53X2): General door in fluctuation runtime,door piece and guideaway directly friction which makes big noise, what's more, the door piece and guideaway is extremely easy wear. JiAnDa anti air inlet guide use specially designed the deslending wear-resistant materials, can reduce effectively switchgroup runtime noise, but also extend the service life of the door. Adopting new technology to fix the guide rail, the door is more beautiful, solid, durable, more suitable for large span and large area, high standards of large factory, warehouse.
